

# Concept *of our work*

Welcome to a new concept of prosperity, based on sustainability and improving the quality of life on our planet.

A simple and pioneering idea, conceptualized on mutual prosperity between the environment and people just like you, willing to invest in a better future for their next generations.

*Transforming capital  
through life*

# A worldwide **problem**

Our ecosystem has been suffering for a long time, especially over the past few decades. Our forest reserves suffer more and more from unregulated logging as tons of polluting gases are dumped into the environment on a daily basis.

A sad and dangerous reality, which we can no longer ignore, causing storms, floods, devastating floods, extreme heat, desertification and several other catastrophes.

*Every 2 seconds a football field  
is devastated in our forests*

# **The future** *of next generations*

What legacy will we leave for future generations? What legacy do we want to leave?

If you have this awareness and have already asked yourself what you could do to change this reality: ***we have the answer!***

# World Demand

The global demand for hardwood grows on average **14%** per year, figures that make this input an increasingly exclusive and valued product.

Europe and North America each account for **32%** of global hardwood lumber consumption. China represents **19%**, so this three countries represents over **80%** of total global consumption.

This growing increase in demand implies the inevitable expansion of the market, which **presents to be as the perfect** segment to invest in a long term.

*We are facing an extremely promising scenario!*

# Global Presence

The fiscal headquarters of the **GreenGold Organization** Group is located in Finland, where the company maintains one of its farms with trees already planted.

We are also present in Poland and Venezuela, with noble tree farms.

*Contributing to the environment  
and profiting!*

# Nowadays

The **GreenGold Organization** has more than **1 million** adult hardwood trees planted in its own and partner soil and with a production capacity of more than **8 million** seedlings per year to supply the market.

In addition, **GreenGold** has sought to revolutionize the market by creating seedlings in a genetic laboratory, which **guarantees the production** independent of climatic or soil and pest issues.

**+ 8 million**  
*seedlings trees*

**+ 1 million**  
*adult trees planted*

# Our Product

Following the growth of the hardwood market, GreenGold is expanding its operations offering people like you the chance to participate in this new business.

You will have opportunities to buy **Guanandi trees** (*calophyllaceae family*) already planted **7 years** ago, with an average of **7 meters** in height, with cut forecasted **12 years** from now.

After the cut, the logs will be transformed into planks and converted into cubic meters of noble raw material, to then be delivered to the consumer market.

**All these characteristics, make it one of the best species of planting and investment nowadays.**

**7 years**

**7 meters**  
*height*

**12 years**  
*from now*

Companies and industries that generate polluting gases, need to adopt measures that compensate for polluting processes.

They invest in an emission reduction project by purchasing Carbon Credits from companies that produce carbon offsetting.

The trees planted in our forests contribute to the environment by reducing greenhouse gases and other pollutants in the atmosphere.

# Carbon Credits

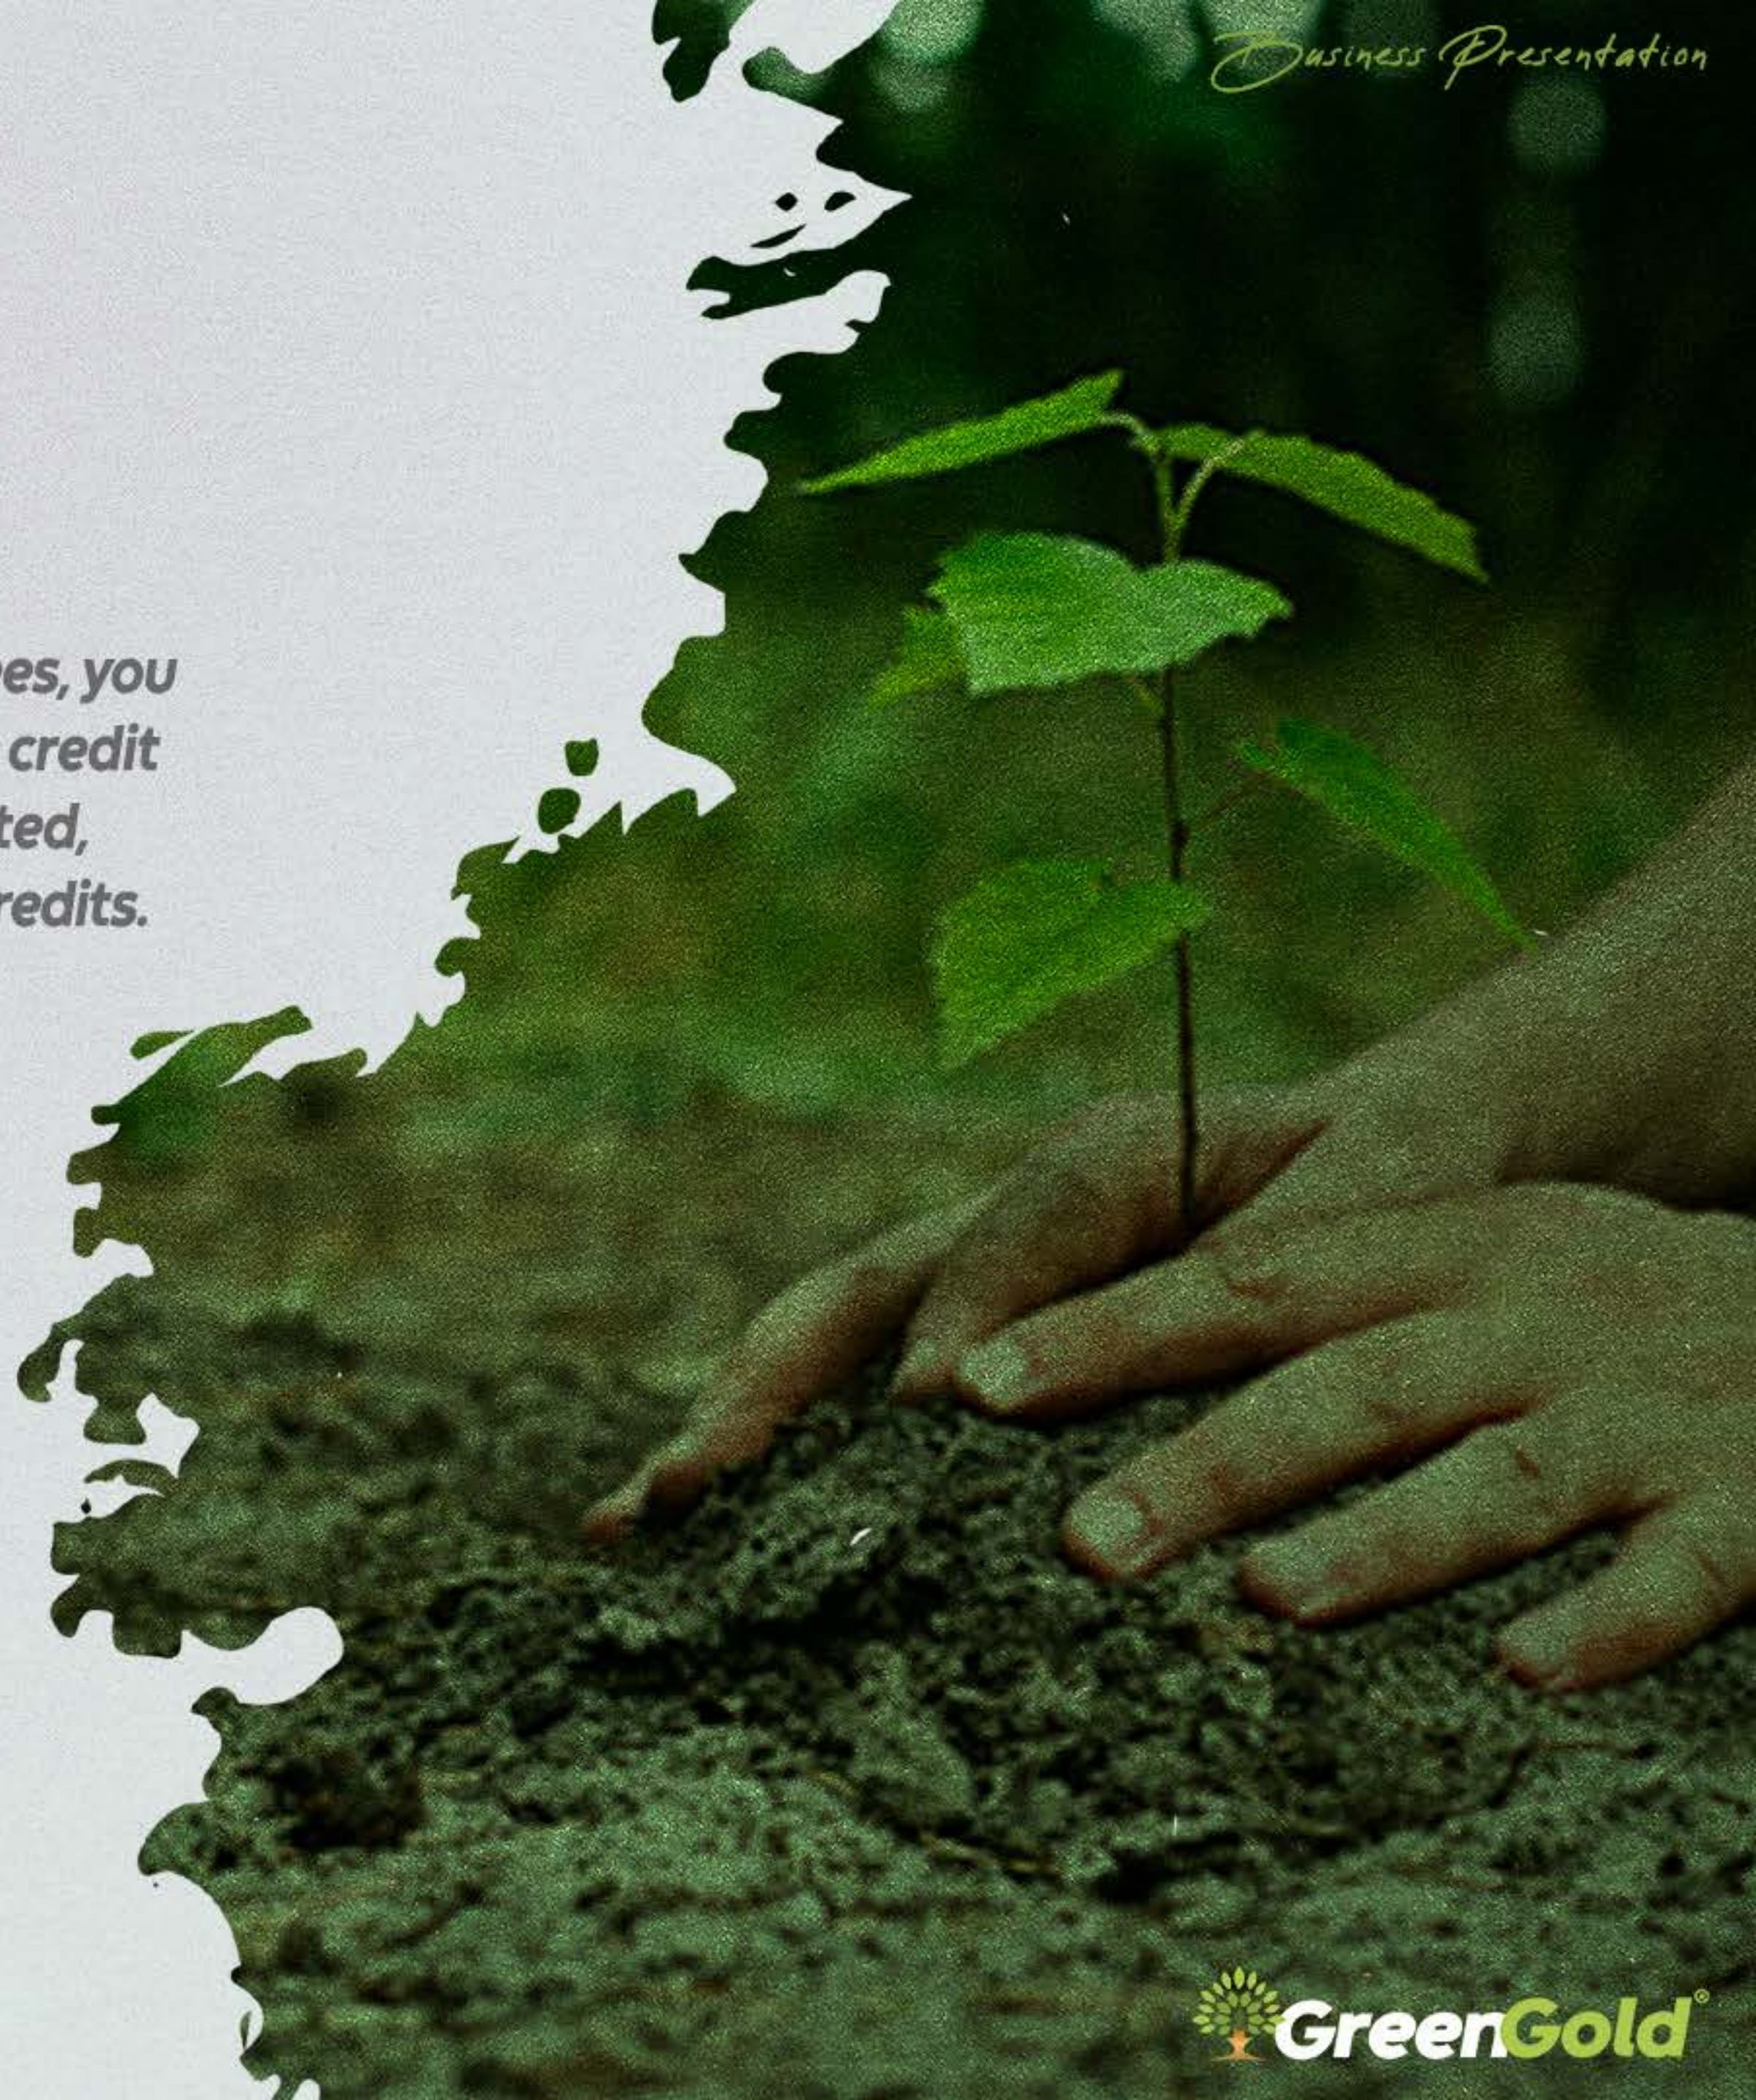

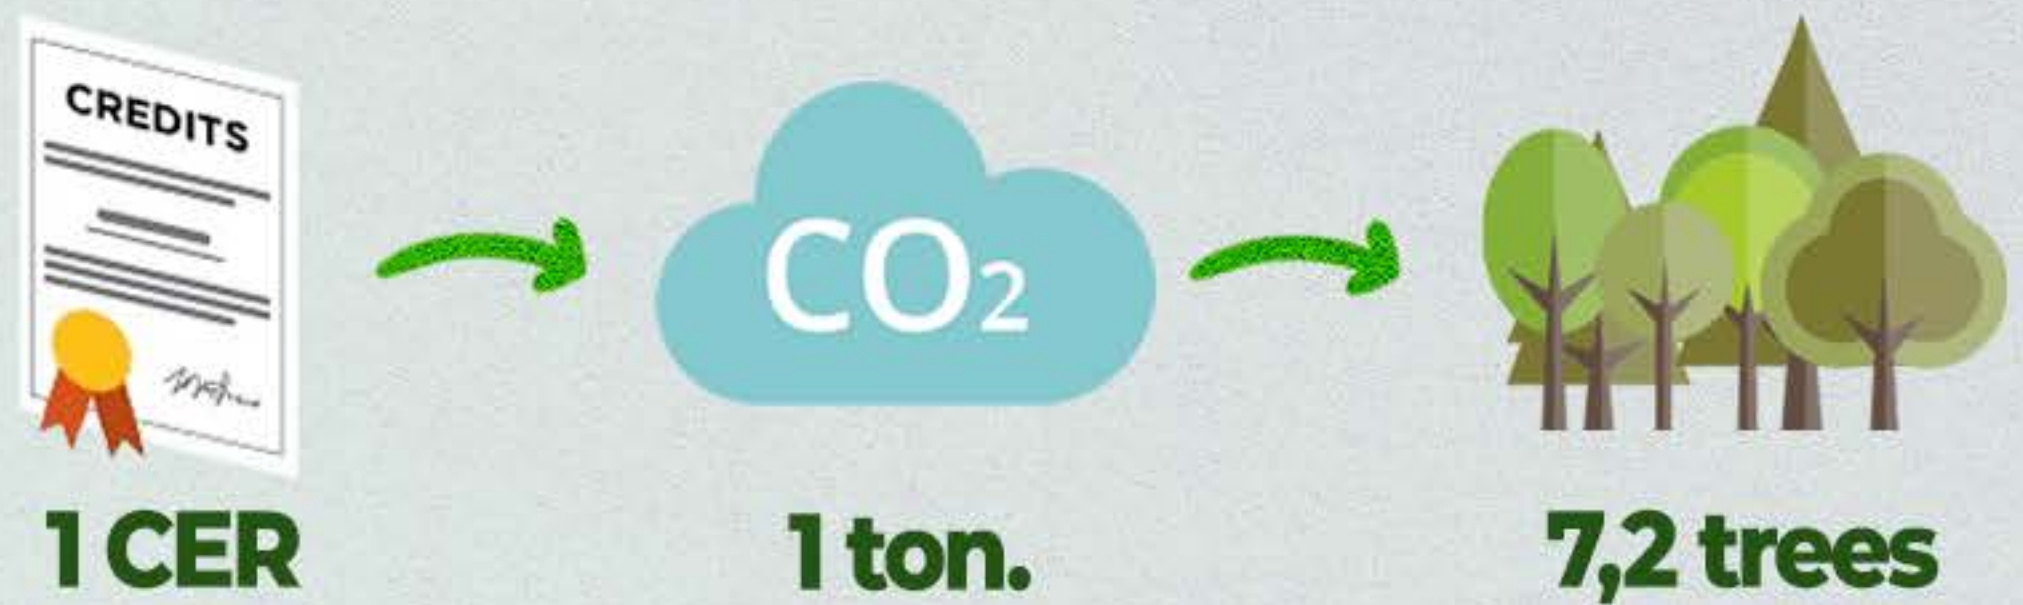

This initiative generates the Carbon Credits to Green Gold by the production of carbon offset, which are sold to polluting companies, generating profits for Green Gold partner users.

# How to Profit

A carbon credit represents one metric ton of carbon emissions that is avoided by completing an activity in a less carbon intensive way.

During the lifetime of the trees, you can benefit from the carbon credit generated by the trees planted, through the sale of carbon credits.

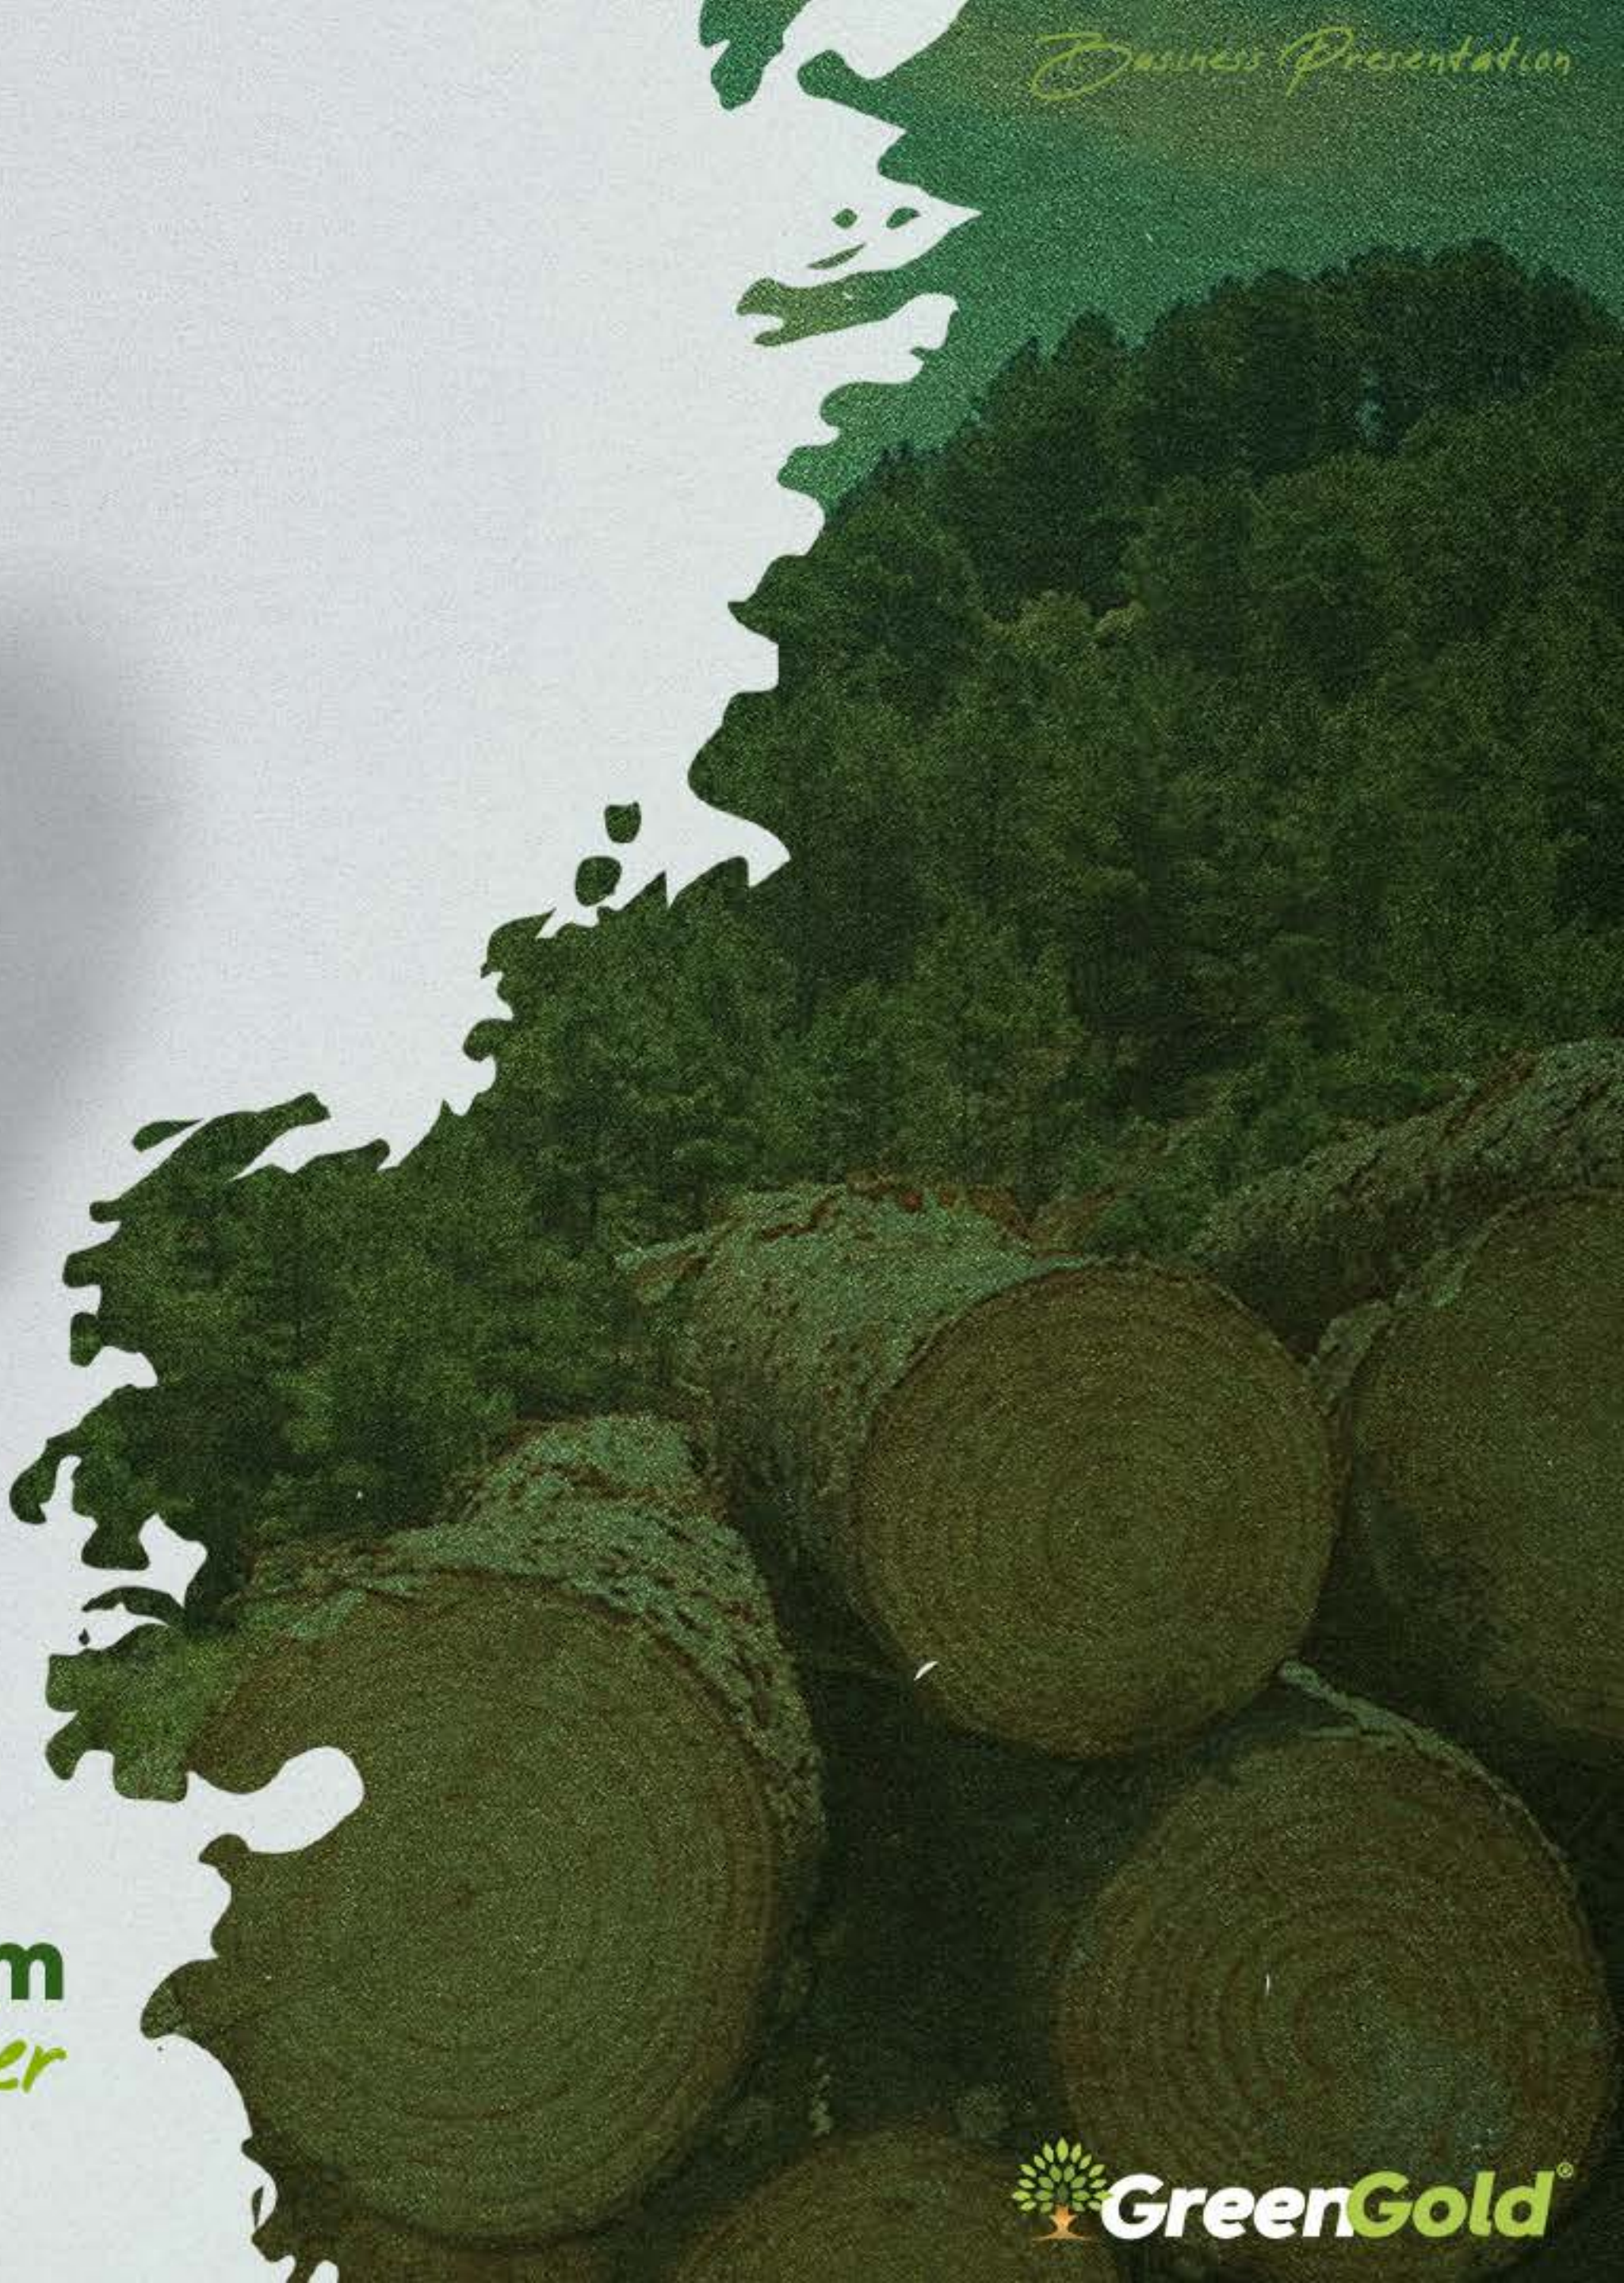

# How to Profit

You will also profit from the profitability of the wood, in the final period of **12** years, when cutting the trees.

A tree with an average of **30m** height x **0.60m** diameter is equivalent to **18** cubic meters. With the cubic meter selling for **\$400 USD**, with the sale of **1** tree we have **\$7,200 USD**. Costing **\$25 USD** each tree.

**Adult trees**  
reaches about:

# Marketing

## Rules and Norms

1

**GreenGold** only sells trees already planted, thus working with products available in stock.

2

**GreenGold** does not conduct a public offering of its products. Our sales are made exclusively to our Eco-Entrepreneurs.

3

Although hardwood is a product that historically been commercially advantageous, and projections on the future market point to extremely positive results, GreenGold cannot guarantee the profitability of its products, since we are subject to universal laws of commerce and also, of nature (factors external and climatic).

# Informations

The acquisition of the Forest Bond is done only once and users will obtain benefits throughout the life of the tree, that is, until the trees reach maturity to be cut (considering what is currently planted will be 12 more years).

Each user may acquire a single Forest Bond (unique email per user).

## Upgrade

- When the upgrade is made, only the price difference of the title will be paid.

## Residual Bonus

- The credit bonus will be credited Monday through Friday at 0:00 UTC.

## Network Bonus

- For your rating you need a direct guest on the left and one on the right.
- The two qualifying guests do not give binary scores.
- As long as you are not qualified, you do not receive a score or binary bonus.
- The daily limit of the binary is not cumulative.

## Withdrawals

- Request for withdrawals from Monday to Friday from 9:00 a.m. to 7:00 p.m. UTC
- Payments will be made the next day until 19:00 UTC.
